

# Paint-Saver Palette™

Clip-Board

## Less prep. More colors. More painting.

The **Paint-Saver Palette** from FineArtTech lets you arrange, transport & store your colors on a durable, lightweight, *flat* surface.

Attaches to any easel—positions your paint supply up off your mixing surface

Side view

.032 gauge high strength aluminum alloy

**Clips on**—firmly attaches to most artists' palettes & mounting surfaces (1/8" to 1/4" thickness)

**Designated handling area**—keep clear of paint for grasping loaded palette

**Laser-etched grid**—helps you keep your colors laid out just the way you want

**Protective housing**—grips and protectively covers paints during transport

**Fits in freezer**—housing is size of a standard ice cube tray—easy to store in freezer between painting sessions

**"Floating" palette**—(like its digital counterpart) your colors stay arranged—and can be quickly moved from studio to plein air in a few seconds

### Getting ready to paint

think about the time it takes you to:

- open your paint box
- find a tube of paint
- determine where you're

going to place that color on your palette

- unscrew the cap (find your pliers if too tight!)
- squeeze out the color
- deal with excess oil separation
- put the cap back on
- put the tube away

(now multiply this by the number of colors on your palette)

*Do you really want to go through this each time you paint!?*

Digital version of Camille's palette — (used in her ONLINE CRITIQUES)

## Superb savings.

**Save time** — *START painting quickly, with your colors laid out and ready to go—STOP painting just as quickly... simply slip loaded palette into its housing*

**Save paint** — *lay out plenty of pigment (paint like a millionaire) WITHOUT worrying about wasting paint—store and preserve unused colors in freezer*

**Save space** — *load, and reload your palette at home... no need to bring a paintbox packed with your entire color assortment*

**Save weight** — *no need to lug full tubes of paint—carry a set of partially used-up tubes to replenish your colors*

**Save money** — *on paint you might have wasted; on workshop or class time you can now totally devote to receiving instruction—not getting ready to paint (see sidebar)*

**Save energy** — *with your colors always organized and laid out, you'll have that much more mental and physical energy to spend on painting*

**Save momentum** — *enhance your workflow—get and stay in the zone; find colors quickly in their familiar positions; maintain focus on seeing and interpreting light and color*

**Save materials** — *conserve your canvas and gesso boards—use your digital PsP to see and experiment with your colors onscreen—pre-visualize (and/or rescue) works in progress!*

### Digital Access:

Download palettes, color charts, and swatch templates — work with your preferred pigments & layouts onscreen.

**CONNECTED COLOR TOOLS** — linking traditional materials with today's technologies.™

**Convenient**

Layout your paints once — and never have to think about your layout ever again

**Customizable**

Layout your own color arrangement — or adopt one of several recommended at *PsP* "Digital Access" page

**Extremely portable**

Compact housing, and plastic carrying case provide quick, secure, clean transport of colors between studio and plein air locations

**Ready to paint in seconds**

Your complete palette of colors — clean, organized, and ready for use — easily access your paints whenever you wish

**Lightweight**

Ideal for plein air — holds enough color for full day's worth of painting

**Orderly color arrangement**

Laser-etched grid helps you arrange your colors evenly, and keep them separate from one another

**Spatial organization**

Grid is optimized for arranging color in patented artists' triangle-to-rectangle color format — visualize and view your paint supply as an ROYGBV color chart

**Color keyboard**

Colors placed in consistent locations enhance painting workflow — find your colors quickly in their familiar positions

**Digital access**

Grid layout provides compatible format for simulating palette on screen — use your same layout of pigments as a "colorpicker" in all your computer graphics applications — perfect for conducting online classes and critiques

**Precisely engineered**

Tightly clips onto standard 1/8" thick palettes and boards; can accommodate up to 1/4" thickness

**High strength**

Both *PsP* and housing made from 5052 aluminum-magnesium alloy used in boats, aircraft, and aerospace structures

**Storage-sized**

*PsP* and housing together are the size of a standard ice cube tray — paints can be easily stored in freezer between painting sessions

**Long-term preservation**

Placing *PsP* in freezer keeps paints fresh almost indefinitely — aluminum helps thaw out quickly — never miss a chance to paint!

**Corrosion resistant**

When freezer is unavailable, paints can be prevented from drying by submerging under water

**Cost effective**

Pays for itself many times over in terms of paint, time, and energy saved

**Adaptable to various painting setups**

Besides clipping onto traditional handheld palettes, inexpensive hardboard accessories let *PsP* easily mount to most easels and pochade boxes, providing hands-free functionality in the studio or outdoors

**Enhanced mixing area**

*PsP* held in separate "location" means your entire mixing surface can be left clear for unencumbered mixing — and frequent, easy cleanup

**Inclined position**

*PsP* when placed in inclined position — cuts glare, makes colors easier to reach and see, and lets you more easily shield your paints from the drying effects of direct sunlight

**Pure colors**

Pigments isolated from mixing surface make it easier to keep colors clean
